Version 1.1.1172 [released on 27th of October 2014]

- Improved Clear Device Data process:
 - More feedback & user interaction
 - More error prone
 - Can fix corrupted databases
- Updated splash screen

Version 1.1.1121 [released on 23th of June 2014]

- Minor layout changes
- Refactored SDT2xxDriverInstaller logic

Version 1.1.1085 [released on 5th of May 2014]

- Included SDT2xxDriverInstaller
 - Sherlog Reporter now checks if the computer has the new SDT2xx driver installed. If not, the user gets alerted.
 - This check occurs after the installation of the Sherlog Reporter and every time when the user is about to connect to the device:
 - Download data from SDT270
 - Clear device data
- The user is not forced to install the driver, he can ignore the warning. If he wants to install the driver, he just has to click the link (note: the installer is included in the software; it is not downloaded).
- As an extra feature, in a similar way, these forms also alert the user if he did not yet connect his SDT270 to the computer.

Version 1.1.979 [released on 11th of February 2014]

- Fix: if expireDate of operator in imported sherlog.db is empty, the clear data failed (when copying the operators to the empty database). Fixed now (will use minimum date).
- Fix: toolbar displayed &File and &Data. Removed the & character.
