

# Air & Structure Borne Ultrasound Inspector

## ANST Level 1 Certification Training

### Introduction to the training

SDT's Level 1 Airborne and Structure Borne Ultrasound Inspector's course is a two and a half day comprehensive mix of theory and practical experience. Working from the Level 1 course guide, students are exposed to introductory sound theory and how it is applied to the inspection disciplines demanded by an effective airborne ultrasound program.

### Course objectives

- Promote Inspector Confidence
- Provide a Deeper Understanding of Ultrasound Technology
- Ensure Inspectors Meet the Standard Level of Knowledge and Expertise
- Uphold the Unique and Significant Place of Ultrasound Inspection in Predictive and Preventative Maintenance Programs.

### You will learn

- The principles of Ultrasound Applied to Predictive Maintenance
- Properties of Leaks
- How to Quickly Find Leaks in Any Industrial Environment
- How to Apply Sound Based Techniques to Lubrication Tasks
- How to Apply Sound Based Techniques to Predict Mechanical Failures
- How to Identify a Faulty Steam Trap
- The Effects of Electrical Faults and How to Safely Detect Problems

### Learn New Inspection Techniques!

#### • Leak Detection

Improved innovations and technology mean new methods for leak detection. Learn the answers to common questions like, "How can I quantify accurately the true cost of compressed air leaks" or "Can I really quantify a leak based only on the dB level?"

#### • Bearing and Mechanical Monitoring

Discover the newest principles for digital inspection and AVM Acoustic Vibration Monitoring. Get updated on the industry's trend toward sound-based lubrication scheduling and sound-based applications of lubricants.

#### • Electrical Inspections

Ultrasound and Infrared inspections go hand-in-hand when it comes to inspection of high and low voltage electrical systems. Discover important tips for inspection of switch gear panels. Learn to distinguish the sound characteristics of arcing, tracking, and corona discharge. Study important safety tips for ultrasound inspectors working in high voltage areas.

## • Evaluating Steam Traps and Valves

How do you know a steam trap has failed? Temperature? Ultrasound? Visual Inspection? Or all of the above? We will show you how to save precious hours inspecting internal leakage on hydraulic valves.

### Course Outline

- Overview of the SDT Certification Training
- Principles of Sound
- Types of Sounds, Wavelength, Mediums, Sound waves
- Human Ears and Hearing
- Types of Ultrasound
- Airborne Ultrasound Equipment Construction and Characteristics
- Airborne Ultrasound Testing Methods
- Indications and Types of Leaks
- Properties of Leaks
- Principles & Techniques in Leak Detection & Location
- Effects of Undesirable Leaks
- Electricity and Safety Considerations
- Disruptions in Electrical Flow
- Types of Electrical Discharge
- Effects of Stray Electrical Discharge
- Principles and Techniques in Corona, Tracking and Arcing Inspections
- Principles of Structure-borne Testing Method
- Valves and Steam Traps
- Operating Principles of Valves and Steam Traps
- Effects of a Defective Component
- Principles and Types of Mechanical Inspections
- Stages of Mechanical Failures
- Principles and Inspection Methods of Rotating Mechanical Equipments
- Principles and Methods for Valves and Steam Traps
- Principles of Acoustic Vibration Monitoring (AVM)
- Predictive Maintenance and Asset Management
- PC Interface
- Testing and Documentation Review & Questions from Day 1 & 2
- Written Examination
- Practical Examination

### Language

Language of the training, syllabus and course documentation is English. All trainees are, therefore, expected to have a good working knowledge of the English language. The examination questionnaire will be issued in English.

### Terms & conditions

- Training fee: 1 200 €, excl. VAT
- The candidate takes care of the hotel accommodation himself.
- Welcoming coffee, coffee breaks, and lunches are provided, and are included in the training fee. Please note that all registrants must fully pay their training fee prior to the commencement of training. Upon enrolment in the course you will receive an invoice with clear remittance instructions.
- Please note that the training starts promptly with registration beginning at 8:30 am.
- At that time, you will receive a hard copy of the syllabus.
- In case you should have any further questions, please do not hesitate to revert.
- This training is organized for a maximum of 15 attendees.
